Sr No.	Assignment Question
1	<p>University Result Simulation</p> <p>A university desires to display the exam results of its students for all semesters using XML and CSS. The results should be displayed as follows:</p>  <p>Figure 1: Output Result</p> <p>At the top of the screen, the name of the university should be displayed in white on black background with a border. Then on the next line(s) the address of the university should be displayed in the same manner except that the border need not be so prominent.</p> <p>The results should be displayed in the following manner. First the Semester number should be displayed in white over a black background. Next, a student's name should follow in white over grey background. The students name should follow by a block of subject names and the student's grades in those subjects. All the students, for the respective semester, should be represented in the following manner. The next semester's details should follow the first one and so on.</p> <p>Create the XML and CSS document for the same. Simulate data for about fifteen students (three semesters – five students each).</p>
